SANCHIT JAIN

Senior Backend Engineer | Node.js, TypeScript, Microservices | Full-Stack (React)

Noida, India | +91 9634810733 | sanchitj439@gmail.com | Portfolio | LinkedIn | GitHub

PROFILE

Senior Backend Engineer with **4.5+ years** building Node.js and TypeScript microservices for high-volume ordering, payments and real-time systems across restaurant tech, fintech, aviation and e-commerce. Currently on Americana's 21+ service platform behind KFC, Pizza Hut, Hardee's and Krispy Kreme in MENA and Central Asia. Deep in distributed systems, API security, performance and production reliability; builds React frontends when a feature needs one owner end to end.

SKILLS

Languages: JavaScript (ES6+), TypeScript, Python, Go
Backend: Node.js, NestJS, Express.js, Koa, REST APIs, GraphQL, gRPC/Protobuf, WebSockets (Socket.IO)
Architecture: Microservices, Event-Driven Architecture, System Design (HLD/LLD), Multi-tenancy, Idempotency, API Gateway
Databases & Caching: MongoDB, PostgreSQL, MySQL, Aerospike, Redis, Elasticsearch
Messaging: Kafka, RabbitMQ
Cloud & DevOps: AWS, Azure, Docker, Kubernetes, Linkerd, Jenkins, Bitbucket Pipelines, GitHub Actions
Observability & Quality: New Relic, Kibana, Jest, SonarQube, Azure Key Vault
Payments & Domain: Payment Gateway Integration (Epay, Kaspi), POS Integration, Multi-currency, Localization, Kiosk Ordering
Frontend: React 19, Redux / Context API, Tailwind CSS, HTML5, CSS3, Three.js / React Three Fiber, Vite; built and shipped my 3D portfolio on Vercel with GitHub Actions CI/CD
AI Tools: Claude API, Claude Code, GitHub Copilot, OpenAI Codex, Gemini

EXPERIENCE

Senior Backend Developer | Americana Restaurants (India) Pvt. Ltd. Jan 2026 – Present

- **Platform:** Build features across a **21+ microservice** ordering platform (Koa, gRPC, Kafka, RabbitMQ) on Kubernetes with a Linkerd service mesh, streaming order events to delivery and POS systems.
- **Resilience:** Rebuilt the Aerospike connection layer for every microservice with retry, background reconnection and self-healing, plus New Relic events for connection health.
- **API security:** Blocked **50K+ abusive requests/day** with rate limiting, Joi validation and API-gateway rules; moved secrets to Azure Key Vault and fixed JWT audience validation.
- **Observability:** Cut production incidents by **~40%** and incident response from **30 to under 10 minutes** through centralized logging, monitoring and alerting.
- **Market launch:** Delivered the Kazakhstan launch with Epay and Kaspi payment integrations, RU/KK localization and multi-currency precision for POS totals.
- **New product:** Designing a multi-tenant NestJS SaaS with tenant-aware configuration and RBAC so new restaurant brands onboard faster and at lower cost.
- **Code quality:** Led a platform-wide SonarQube cleanup of vulnerabilities and duplicate code, removing a net **46K lines**.
- **Leadership:** Informally lead **7 senior developers** through code reviews and design discussions; interviewed **20+** candidates for senior Node.js roles.

Backend Developer | Appinventiv, Noida Feb 2022 – Jan 2026

- **Ordering platform:** Built order, cart, payment and delivery services handling **200K+ orders/day** for Americana's brands, with delivery-ETA, delivery-charge and order-status flows.
- **Kiosk ordering:** Contributed to a self-service kiosk system rolled out in **10+ countries** and linked to **$10M+** revenue growth, including KFC U.S. (Yum! Brands) kiosk APIs for menu sync and POS orders.
- **Performance:** Cut critical API latency from **~2.5s to ~300ms** with parallel async processing, MongoDB compound indexes and Redis caching; made order writes idempotent to stop duplicate-entry failures.
- **Cost:** Saved **~20% annually** on infrastructure by right-sizing VMs, improving caching and data-access patterns.
- **TagHawk (community marketplace):** Built a campus and apartment resale backend with Elasticsearch listing search, transactional inventory that prevents overselling, anonymous Socket.IO chat and escrow payments.
- **Snowball (stock investing):** Built onboarding and KYC flows, portfolio and holdings APIs on PostgreSQL, and live price updates over WebSockets.
- **Crew Connex (airline crew logistics):** Developed Express.js and GraphQL APIs for crew rosters, duty times, hotel check-ins and cab schedules, with real-time alerts through AWS SNS.

EDUCATION

B.Tech, Computer Science and Engineering | Hindustan College of Science and Technology (Sharda Group) | 2022
