Sanchit Jain

Noida, India| +91 9634810733 | sanchitj439@gmail.com | sanchitjain01

Profile

Senior Software Engineer with 4+ years of experience building scalable microservices and high-performance APIs using Node.js and AWS. Specialized in system design, distributed systems, and performance optimization.

Skills

Core: Node.js | System Design | Microservices | REST API Design | Distributed Systems

Languages: JavaScript (ES6+), TypeScript, Python

Frameworks: Node.js (Express.js, Nest.js)

Databases & Caching: MongoDB | MySQL | Redis | Aerospike | Database Optimization | Caching Strategy

Cloud & DevOps: AWS | Docker | CI/CD | High Availability | Containerization

Messaging & Communication: RabbitMQ | Kafka (Event Streaming) | gRPC | Event-Driven Architecture

Experience

BACKEND DEVELOPER | APPINVENTIV, NOIDA | FEB 2022 – JAN 2026

- Led development of **high-scale backend systems and APIs**, handling **200K+ daily transactions** and ensuring performance under peak load.
- Built and deployed a **restaurant kiosk ordering system**, contributing to **$10M+ revenue growth** and successful rollout across **10+ countries**.
- Strengthened platform security by implementing **rate limiting, input validation, API gateway**, blocking **50K+ malicious requests daily,** and reducing unnecessary resource consumption.
- Optimized infrastructure by **right-sizing VM usage, improving caching strategy and restructuring data access patterns**, achieving **~20% annual cost savings** without impacting performance.
- Enhanced production reliability by introducing **centralized logging, monitoring (New Relic), and alerting**, reducing incidents by **~40%** and improving response time from **30 mins to <10 mins**.
- Designed a **high throughput microservices architecture** capable of processing **200K+ orders/day**, ensuring scalability and system resilience under peak load.
- Improved API performance using **parallel async processing in Node.js and database Optimization**, reducing response time from **~2.5s to ~300ms** for critical endpoints.

Worked on **high-scale, fault-tolerant, distributed systems with high concurrency**, ensuring reliability, scalability, and performance in production environments.

Education

Bachelor Of Technology in Computer Science and Engineering | Aug 2022 | Hindustan College of Science and Technology (Sharda Group of Institutions)
